

Empowering Data-Driven Decision Making for a Growing Pipeline Services Company with a Custom Business Intelligence Dashboard

CASE STUDY

Overview

QIT Solutions partnered with a rapidly expanding pipeline services company, which had experienced a 10x growth following multiple acquisitions in just two years. The client encountered difficulties in managing P&Ls, tracking AP and AR, assessing liquidity, and accessing live, up-to-date information, which hindered their ability to make informed business decisions. QIT Solutions developed a tailored solution comprising a custom Business Intelligence (BI) dashboard and application that consolidated the client's financials, providing comprehensive insights into the organization's financial health.

Client Background

The client is a prominent pipeline services company, specializing in the installation, maintenance, and repair of pipelines across various sectors, including water, wastewater, natural gas, and industrial processes. The company's rapid growth through acquisitions resulted in increased complexity in financial management processes and a need for more effective decision-making tools.

Problem

The client faced challenges in accessing and analyzing financial data from multiple acquired businesses, which impeded their ability to make timely decisions, optimize operations, and drive profitability. They required a solution that could provide real-time financial insights, enabling them to quickly adapt to changing business dynamics.

Solution

QIT Solutions proposed a custom solution consisting of a tailored BI dashboard and application that integrated with the client's existing systems, consolidating financial data from all acquired businesses into a unified platform. The live dashboard provided a comprehensive view of the organization's financial performance, offering critical insights into:

- › Revenue breakdown by business unit, product, or service
- › Gross and net profit margins
- › Operating expenses and cost structure analysis
- › Projected and actual cash flow
- › Debt-to-equity ratio and other financial metrics
- › Key Performance Indicators (KPIs) and trend analysis
- › Sales forecasts and historical comparisons
- › Inventory levels and turnover rates
- › Customer segmentation and revenue contribution analysis

Results

The custom BI dashboard and application developed by QIT Solutions significantly enhanced the client's financial management capabilities, providing key benefits such as:

Informed decision-making

With access to real-time financial insights, the client could quickly evaluate opportunities, risks, and trends, enabling them to make data-driven decisions with confidence.

Holistic financial analysis

The BI dashboard provided a 360-degree view of the organization's financial health, encompassing P&Ls, AP, AR, liquidity, and other critical data, empowering the CFO and CEO to make well-informed decisions.

Proactive performance management

The dashboard facilitated monitoring of KPIs, financial metrics, and trends, allowing the client to identify areas requiring improvement and implement proactive measures.

Increased efficiency and collaboration

The custom application streamlined the process of gathering, analyzing, and sharing financial data, fostering greater collaboration between finance, operations, and other business units.

Conclusion

QIT Solutions' custom BI dashboard and application transformed the financial management process for the rapidly growing pipeline services company, enabling them to harness the power of data-driven decision making. The comprehensive financial insights provided by the dashboard allowed the client to effectively manage their growth, optimize operations, and drive profitability, positioning them for continued success in the pipeline services industry.
